Introduction

This bibliography contains all publications produced by the Coastal Oregon Productivity Enhancement (COPE) Program during the period of FY1987 - FY1992 (March 1, 1987 - September 30, 1992). It also includes all articles published in the quarterly newsletter *COPE Report* which first published in 1988. The COPE bibliography will be revised in May and November of each year.

The goal of the program is to develop knowledge that will contribute to increased economic and social benefits derived from the forests and streams of the Oregon Coast Range. Achieving this goal requires that two objectives be fulfilled: (1) develop new information on reforestation and management of riparian zones; and (2) facilitate the implementation of research results by demonstrating improved practices to users.

The COPE Program, initiated in 1987, is administered by the USDA Forest Service's Pacific Northwest Research Station and Oregon State University's College of Forestry. An advisory council consisting of representatives from cooperating organizations provides program administrators with advice on program policy, direction, funding, and effectiveness.

The Program has two related parts: *Fundamental COPE* and *Adaptive COPE*. In Fundamental COPE, Forest Service and College of Forestry scientists develop new information through basic research. The Adaptive COPE Team is comprised of College of Forestry scientists and is stationed at the Hatfield Marine Science Center in Newport. This Team conducts adaptive research and tests the applicability of existing research to conditions in the Oregon Coast Range. It has major responsibility for technology transfer, which is directed primarily to professional audiences. Included in this effort are workshops, field trips, publications of the quarterly newsletter, *COPE Report*, and one-on-one consultations with individuals from cooperating organizations. The Adaptive Team is also responsible for increasing the public's awareness of COPE activities. County Extension forestry agents work closely with Adaptive Team members to extend the Program throughout the 13-county COPE area.

Primary funding for the COPE Program is provided by the USDI Bureau of Land Management and the USDA Forest Service's Pacific Northwest Research Station. Additional funds come from other federal and state agencies, forest industry, county governments, and management associations. The COPE Program is scheduled to be completed in 1998.
